

About SECUDE

The SECUDE Group of companies is a global leader in providing IT security software products, solutions, and consulting to enterprises and governmental organizations. Through its solutions, SECUDE enables enterprises to protect critical data in use, in motion, and at rest. In addition to its leading encryption-based data protection suite, SECUDE has gained the position as the leading trusted partner in all IT security-related issues for SAP customers including increasing productivity of secure SAP environments.

SECUDE was founded in 1996 out of a partnership between SAP AG and the Fraunhofer Institute, Germany, and over the years, it has experienced rapid growth. Today, SECUDE has operations in Europe, US, Middle East, and Asia and has gained the trust of a large number of Fortune 500 companies including 50% of the DAX-listed companies.

SECUDE Product

Portfolio: SECUDE offers a complete portfolio of innovative security solutions to eliminate IT security threats of enterprises of all kinds, sizes, and industries.

FinallySecure Enterprise™ provides total data-at-rest security with software- or hardware-based full disk encryption. FinallySecure is the first link in the end-to-end authentication chain, providing an adaptive technology with risk management and productivity gains for end-to-end security. This complete security umbrella protects against loss of data, fines from noncompliance, and destruction of brand value. In addition, end-user transparency results in a return on investment from productivity gains. FinallySecure allows for migration from single user to enterprise-wide use and from software- to hardware-based encryption. Balancing focus on

central management and end-user experience will allow your business to survive, adapt, and grow in a heterogeneous IT ecosystem.

Secure Login reliably protects the system environment through strong user authentication, data encryption, and communication. The solution provides single sign-on to SAP applications based on digital certificates as well as OTP (One Time Password) Tokens without the need to set up a PKI.

Secure SignOn offers user-friendly reliable authentication as well as single sign-on capability. It supports both common user authentication with Windows Credentials (username plus password) and authentication with digital certificates. The OPSEC certification from Checkpoint guarantees troublefree interaction of the solution with the VPN Secure Client products.

Secure Folder encrypts data (files and folders) stored on, or travelling between servers, workstations, and portable devices like laptops. The secure cryptographic algorithms offer reliable protection of sensitive data against industrial espionage. They also ensure compliance with legal regulations.

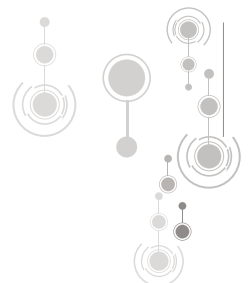

Secure Doc enables organizations to put legally valid signatures on digitally processed documents. This boosts efficiency substantially and directly reduces costs by eliminating the time and effort required to print documents, sign them, and scan them back into the digital medium.

Secure Mail is a plug-in for Microsoft Outlook. It allows the encryption and signing of e-mails and supports S/MIME and OpenPGP formats. It guarantees trust, integrity, authenticity of your electronic communication. Soft tokens, smart cards, USB tokens, and Microsoft's CryptoAPI can be used to store all necessary keys. This allows the degree of security to be tailored to individual requirements and/or to the regulations of each company.

CodeProfiler is the first product worldwide that provides automated testing for ABAP, BSP, and Web Dynpro ABAP applications. Its database contains samples of all relevant insecure coding practices for ABAP. This database, combined with a unique analysis engine, enables CodeProfiler to find known insecure coding practices in ABAP programs with high reliability.

DevicePro ensures that no one can bypass your firewall and walk out with company information on a USB stick or an external hard disc. It also ensures that your company's data will not be endangered through viruses or trojans brought in on external devices such as USB sticks. DevicePro guarantees that only authorized storage media that comply with company policies can be used and that only specifically authorized employees will be able to use external devices. In one word, this is a flexible security solution for devices under a central management.

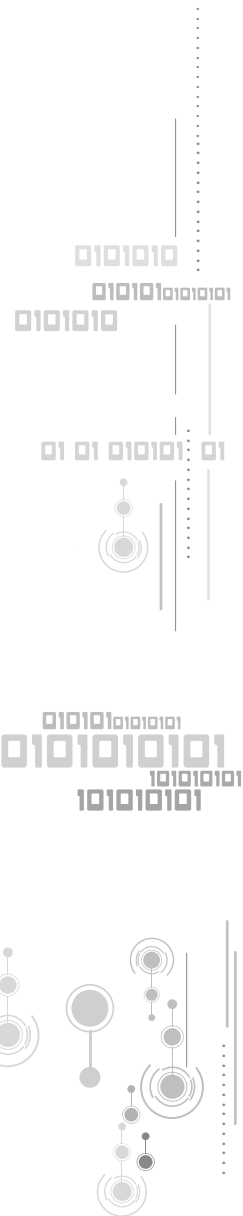

Secure Device is the perfect solution to protect confidential data on laptops, PCs, and USB devices. Critical and valuable data have to be protected especially on mobile devices as this brings higher risks of unauthorized access and reading of confidential data. Secure Device creates an encrypted area called a Secure Safe on your hard drive or external mass storage device to protect data from unauthorized access in case of loss or theft. Data copied into the Secure Safe gets automatically encrypted. Accessing the

Secure Safe requires prior password authentication. Secure Device also provides CD and DVD encryption support.

Secure File guarantees the maximum level of reliability and confidentiality while communicating with your business partners by means of digital signing and encryption of documents. Through Secure Data confidential data can be encrypted and compressed in just a few moments. Exchanging confidential data through e-mail not only becomes easy and comfortable, but also highly secure.

Secure TrustManager provides all the functions necessary for issuing and managing digital certificates and smart cards. It easily integrates into existing IT infrastructures and provides connectors to the most common Certification Authorities (CA) such as MS Enterprise CA or VeriSign OnSite. A self-service function provides automated help to users with card problems which significantly raises the level of card availability.

The **SAP Security Consulting** team has unique expertise to solve your problems in SAP security environment. Our proven best-practice methodology for authorization management guarantees you maximum benefit of your identity and access management solutions. The protection of your SAP system landscape can help save costs and significantly improve the flexibility of your application management.
